## DETAILED ACTION

### *Allowable Subject Matter*

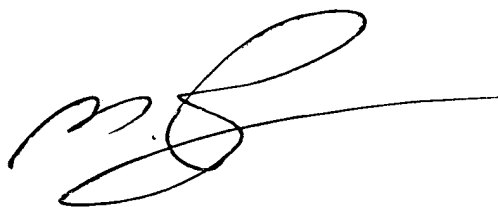

Claims 1-23 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method for spatially composting digital video images with a tile pattern library. Each independent claim identifies the uniquely distinct features "decomposing created composting window into a first number of contiguous tiles, wherein the first number of contiguous tiles equals a second number of contiguous tiles in chosen tile pattern, wherein a third shape and a first position of each of the first number of contiguous tiles matches a fourth shape and a second position of a corresponding tile in chosen tile pattern, wherein at least one of the third shape and the first position of a first tile of the first number of contiguous tiles is different from at least one of the third shape and the first position of a second tile of the first number of contiguous tiles, wherein at least one of an angle formed along a boundary between first tile and second tile is other than perpendicular and a portion of boundary is a nonlinear curve, and wherein each of the first number of contiguous tiles is formed by the pixels within the display area". The closest prior art, Duluk (6,552,723), May (5,815,168) and Hanco (6,483,515) discloses a similar system, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
